GenFlows — Website & Access Action List

The SEO/AEO fixes that **cannot** be done through the HubSpot content API — they need theme/template access, portal settings, or a credential. Hand Part 1 to the website developer; Part 2 is for the account owner.

Date: 22 July 2026 · **Property:** www.genflows.com (HubSpot CMS, portal 49399880) · **Companion audit:** GenFlows_SEO_AEO_Report_2026-07-21

Already fixed from the automation (no action needed)

These items from the audit are **done and live** via the HubSpot API — listed so the developer doesn't duplicate them:

- DONE **FAQPage schema** injected per-post into `<head>` (per-post Head HTML field) on all 45 posts that have an FAQ section — verified rendering live. *A native template module (Part 1 · #2) is now optional, not required.*
- DONE **52 title tags** trimmed to ≤60 chars, keyword-first.
- DONE **10 short/broken meta descriptions** rewritten to 140–160 chars.
- DONE **5 topic-cluster tags** created and applied across all 62 posts.
- DONE **1970 publish date** on the LinkedIn-agencies post corrected.

Still API-blocked and therefore listed below: featured images (needs the `files` scope — Part 2 · #2), sitemap regeneration (portal/behaviour, not per-post — Part 1 · #1), and all query analysis (needs Search Console — Part 2 · #1).

Part 1 · Website developer — theme, template & portal settings

#	Task	Where / how	Priority
1	**Get the 18 newest posts into the sitemap & keep it current.** The live `sitemap.xml` last rebuilt 2026-07-11 and is missing every post published since (full list on p.3). Force a regeneration and confirm new blog posts are auto-included going forward.	HubSpot: *Settings → Content → Pages → SEO & Crawlers*. Confirm the blog is included in the sitemap; re-save to trigger a rebuild. Then verify all 62 blog URLs resolve in `/sitemap.xml`.	P0
2	**Add the `Sitemap:` directive to robots.txt** and explicitly allow AI crawlers. Current robots.txt has only `Disallow` rules — no sitemap line, no AI-bot guidance. Use the exact block on p.3.	HubSpot: *Settings → Content → Pages → robots.txt editor* (or theme-level if overridden).	P0
3	**Default OG / featured-image fallback** in the blog-post template — output a branded image when a post has no featured image. 58/62 posts currently have an empty `og:image`, so social & AI cards render blank.	Blog post + listing template `<head>`: set `og:image` / `twitter:image` to the post image with a branded default fallback.	P1
4	**Author & Organization E-E-A-T schema.** Extend the post's `BlogPosting` JSON-LD with a real `author` (name, bio, `sameAs`, link to `/consultancy/wouter`) and an `Organization` with `sameAs` (LinkedIn + Clay/Smartlead partner profiles you already display). Snippet on p.3.	Blog post template schema block.	P1
5	**Core Web Vitals pass** on the blog template — lazy-load below-the-fold images, defer non-critical JS, check LCP / CLS / INP. Ranking + UX signal.	Theme CSS/JS; verify with PageSpeed Insights on 2–3 post URLs.	P1
6	**Cluster service / landing pages** (Cold Email, Clay/GTM, Outbound Systems, RevOps) as conversion targets. Blog posts currently CTA to `/` only; give each cluster a money page so topical authority routes to something that sells.	New site pages, one per cluster; wire blog CTAs to them.	P1
7	**Pillar-page hub template** — one pillar per cluster with hub-and-spoke internal linking to concentrate authority (topic-cluster model).	New template + HubSpot topic-cluster tool (uses the 5 tags now applied).	P2
8	**Publish `/llms.txt`** — an emerging convention some AI crawlers read to find a site's key content. Starter file on p.3.	Serve at `https://www.genflows.com/llms.txt` (HubSpot: a system page or file, or a serverless/hosted file).	P2
9	**On-page breadcrumb & related-posts module** (not just in schema) — improves internal linking and dwell time.	Blog post template.	P2

Part 2 · Account owner — credentials & settings (5 minutes each)

#	Task	Why it matters / how	Priority
1	**Connect Google Search Console.**	Unblocks all query/position analysis — striking-distance wins, CTR gaps, indexation truth, backlink counts. Run `python3 research/gsc_connect.py` and authorize as bivek@genflowsagency.com. If it shows zero properties, first verify genflows.com in Search Console and grant that Google account access.	P0
2	**Grant the HubSpot private-app token the `files` (and `files.ui_hidden.read`) scope.**	Enables automated upload + attachment of featured images to the 58 posts that lack one — currently the token can edit posts but not manage files. After granting, the automation can backfill all featured images.	P1
3	**After the sitemap is regenerated (Part 1 · #1):** in Search Console, resubmit `sitemap.xml` and use *URL Inspection → Request Indexing* for each of the 18 posts on p.3.	Tells Google about the newest commercial posts directly instead of waiting for a re-crawl. Requires #1 done first.	P0

Appendix — copy-paste assets & the 18 URLs

A · robots.txt — replace the current file with this

```
User-agent: *
Disallow: /_hcms/preview/
Disallow: /hs/manage-preferences/
Disallow: /hs/preferences-center/
Disallow: /*?*hs_preview=*
Disallow: /*?*hsCacheBuster=*

# Allow AI answer-engine crawlers (AEO)
User-agent: GPTBot
Allow: /
User-agent: OAI-SearchBot
Allow: /
User-agent: PerplexityBot
Allow: /
User-agent: ClaudeBot
Allow: /
User-agent: Google-Extended
Allow: /

Sitemap: https://www.genflows.com/sitemap.xml
```

B · Author + Organization schema — extend the post BlogPosting JSON-LD

```
"author": {
  "@type": "Person",
  "name": "Wouter Harink",
  "url": "https://www.genflows.com/consultancy/wouter",
  "jobTitle": "GTM Engineer",
  "sameAs": ["https://www.linkedin.com/in/<wouter-handle>"]
},
"publisher": {
  "@type": "Organization",
  "name": "GenFlows",
  "url": "https://www.genflows.com",
  "logo": "https://www.genflows.com/<logo.png>",
  "sameAs": [
    "https://www.linkedin.com/company/<genflows>",
    "https://www.clay.com/<partner-profile>",
    "https://smartlead.ai/<partner-profile>"
  ]
}
```

Fill the `<…>` placeholders with the real handles/URLs. Keep `@context` / `@type: BlogPosting` as-is.

C · llms.txt — starter

```
# GenFlows
> GTM engineering agency: cold email, LinkedIn outreach automation, and RevOps
> for B2B outbound teams.

## Core services
- Cold email infrastructure & deliverability
- Clay / GTM engineering & workflow automation
- LinkedIn outreach automation
- RevOps & outbound systems

## Key content
- Blog: https://www.genflows.com/blog
- Sitemap: https://www.genflows.com/sitemap.xml
```
